

Cloud Solutions Architect (m/f/d)

About us

As a startup dedicated to public transport, our vision is to make buying tickets for passengers as easy as possible. Therefore, we are developing a ticketing system that automatically detects beginning and end of a journey. Based on the detection, it is possible to provide the passenger with the cheapest ticket.

The problems we are trying to solve are both interesting and challenging: developing a reliable ride detection algorithm based on data from smartphone sensors while creating a solution that attracts both passengers and public transport providers.

We value active collaboration and independent work. We believe that together we can build a great solution that will have a major impact on public transport.

Responsibilities

- Make sure that our cloud infrastructure scales properly and grows with us
- Deploy reliable and maintainable infrastructure on AWS
- Manage all cloud activities that are run on AWS
- Deploy REST APIs
- Design and implement the cloud architecture on AWS

Your profile

- Expert knowledge in AWS
- Experience with Golang
- Deep understanding for cloud architecture
- Experience in working with Docker
- Interest to learn more programming languages as needed
- Passion about solving hard problems

Bonus skills

- Very good knowledge in REST API deployment
- Experience in working with SQL and NoSQL databases
- Advanced knowledge in test deployment (CI/CD)
- Knowledge in Kubernetes

Benefits

 Flexible working hours

 Up-to-date tech stack

 Couch & plants in the office

 Freedom to contribute and implement your own ideas

 Competitive pay

 Free fruits & snacks

 Challenging and exciting tasks

 Flat hierarchies
