

# Flutter Working Student (m/f/d)

## About us

As a startup dedicated to public transport, our vision is to make buying tickets for passengers as easy as possible. Therefore, we are developing a ticketing system that automatically detects beginning and end of a ride. Based on the detection, it is possible to provide passengers with the cheapest tickets.

The problem we are trying to solve is challenging: developing a reliable ride detection algorithm based on data from smartphone sensors while creating a solution that attracts both passengers and public transport providers.

We value active collaboration and independent work. We believe that together we can build a great solution that will have a major impact on public transport.

### Responsibilities.

- contribute your own ideas to our mobile application and shape how passengers of public transport interact with our ticketing solution
- implement new features into our mobile application
- maintain mobile application and flutter web dashboards
- design and develop automated tests to ensure that our mobile application runs perfectly

### Your profile.

- expert skills in flutter / dart (doesn't matter if reached through private projects or in professional environment)
- experience in mobile app development (iOS and Android)
- enrolled at university
- interest to learn other programming languages as needed

### Bonus skills.

- experience with test deployments (CI / CD)
- practical experience in Go
- advanced skills in working with Kafka
- knowledge in working with docker

## Benefits

 Flexible working hours

 Up-to-date tech stack

 Couch & plants in the office

 Freedom to contribute and implement your own ideas

 Competitive pay

 Free fruits & snacks

 Challenging and exciting tasks

 Flat hierarchies
